The overall coordination and monitoring management of the "Fuel Dependency and Energy Insecurity in Sierra Leone" research project will be implemented through a structured project management framework. While I cannot provide a visual organisational chart, I can describe the key components and decision-making bodies involved in project execution.

Project Organizational Structure:

1. Project Director:

  - Responsible for overall project management and coordination.

  - Decision-maker in case of critical project issues.

2. Project Management Team:

  - Comprises Project Manager, Research Coordinator, and Communications Coordinator.

  - Manages day-to-day project activities, including research, data collection, and communication.

  - Reports to the Project Director.

3. Research Team:

  - Comprises research assistants, data analysts, and field researchers.

  - Conducts data collection, analysis, and policy evaluation.

  - Reports to the Research Coordinator.

4. Stakeholder Engagement Team:

  - Manages communication, stakeholder engagement, and community awareness campaigns.

  - Collaborates with local stakeholders, N.G.O.s, and the media.

  - Reports to the Communications Coordinator.

5. Advisory Board:

  - Consists of experts in the fields of energy, policy, and development.

  - Provides guidance and expertise.

  - Meets periodically to review project progress and offer insights.

6. Steering Committee:

  - Comprises representatives from government agencies, academic institutions, and N.G.O.s.

  - Ensures alignment with national and local priorities.

  - Participates in policy development and decision-making.

Key Decision-Making Bodies and Processes:

1. Project Director's Decision-Making:

  - The Project Director holds ultimate decision-making authority for critical project issues, including resource allocation, project direction, and issue resolution.

2. **Steering Committee Meetings:**

  - Regular meetings with the Steering Committee to review and approve key project decisions, including policy recommendations, stakeholder engagement strategies, and research methodologies.

3. Advisory Board Consultations:

  - Periodic consultations with the Advisory Board to seek expert input and validation of research methodologies, findings, and policy recommendations.

4. Project Management Team Meetings:

  - Regular meetings of the Project Management Team to ensure effective coordination and implementation of project activities.

5. Stakeholder Engagement Meetings:

  - Meetings with stakeholders, NGOs, and local communities to discuss project progress, engage in dialogues, and obtain feedback.

6. Project Status Reports:

  - Regular project status reports are shared with all project team members, stakeholders, and the Steering Committee to ensure transparency and provide updates on project progress.

7. Mid-term and Final Project Evaluations:

  - Independent evaluations conducted at mid-term and project completion to assess project effectiveness and impact.

This structured organisational framework and decision-making process are designed to ensure effective project management, communication, stakeholder engagement, and research progress. Regular coordination meetings and consultations with stakeholders and experts, as well as clear lines of authority, will help facilitate the successful execution of the research project.
